PROFILE

Junior software engineer (B.Sc. Software Engineering, graduated June 2026) with hands-on experience building and deploying a production backend during an internship. Strong foundation in full-stack development and machine learning, with a focus on Node.js, REST APIs and modern web technologies. Several years of work at Swedish workplaces – communication, responsibility and teamwork in fluent Swedish.

TECHNICAL SKILLS

JavaScript/TypeScript · Python · SQL · Node.js · Express · React · REST APIs · MongoDB · PostgreSQL · JWT/authentication · Docker · Git

WORK EXPERIENCE

Backend Developer (Internship) – Techniaa Systems, Istanbul

Jul – Sep 2025

- Designed and built a complete production backend for a classroom management platform – from data model to deployed REST endpoints – in Node.js, Express and MongoDB.
- Protected the platform against unauthorized access by implementing JWT authentication (access/refresh tokens, bcrypt) and role-based access control via middleware.
- Enabled a real-time leaderboard without data conflicts by building a points and rewards system with atomic database operations.
- Improved response times through indexing and optimized database queries, and delivered a stable product in daily collaboration with a frontend developer.

Earlier Roles – Karlshamn, Sweden

2017 – 2025

Truck driver (summers 2023–2025), care assistant, postal worker and youth recreation leader – several years of responsibility, teamwork and customer contact at Swedish workplaces.

PROJECTS

Loan Approval Prediction Engine – thesis project · [Live demo ↗](#)

Python · Scikit-learn · FastAPI · Docker

- Achieved 84% accuracy in predicting loan decisions by training and evaluating ensemble models.
- Made the model production-ready by exposing it as a Docker-packaged REST API (FastAPI) with a web interface and risk analysis.

MS Coach – AI Fitness Coach · [Live demo ↗](#)

JavaScript · TensorFlow.js · Capacitor · Supabase

- Gave users real-time feedback on exercise form through on-device pose recognition (TensorFlow.js + MoveNet), without video data leaving the phone.
- Built an AI coach chat, Supabase authentication, cloud sync and offline mode; packaged as a native Android app.

Health Journal · [Live demo ↗](#)

React · Node.js · MongoDB · Chart.js

- Full-stack health app with mood and symptom logging, medication reminders and analytics dashboards.

FridgeForage – latest project · [Live demo ↗](#)

React · Node.js · AI recipe generation

- Recipe app that suggests meals based on the ingredients the user has at home, with AI-generated recipes.

EDUCATION

B.Sc. Software Engineering – Istinye University, Istanbul

Graduated: June 2026

Thesis: ML-based loan assessment system (84% accuracy), deployed as a REST API.

CERTIFICATIONS & LANGUAGES

Google AI Essentials · Google Prompting Essentials (Coursera, 2026)

Swedish – fluent · **English** – fluent · **Arabic** – native · **Norwegian** – proficient

Driving licences B and CE – several seasons as a truck driver with practical domain knowledge in logistics and transport.
